- Temperatures need to be taken and recorded daily while the Agency is open. If Agency is closed on a specific day, write “Closed”
- Each freezer needs a separate log
- Do not take daily temperatures when unit is in defrost cycle or constantly being opened
- Records should not have any blanks, and need to be done in ink without any white out. If a mistake is made, neatly cross out the wrong number and write the correct number beside it so both numbers are readable.
- Record Corrective Action taken as necessary. Leave column blank if no action is needed.
- Keep records for up to 2 years
